

## Bringing the training to YOUR site!

Last year, Autry provided over 3,800 hours of safety training in our community. Autry has applied for and received additional funds to bring new training opportunities through the purchase and development of four training trailers. *These trailers will make it possible for Autry to bring the training to your employees at your company site.* Contact Andy Beck at 580.242.2750, x194 or [anbeck@autrytech.com](mailto:anbeck@autrytech.com).

### 1 General Purpose Trailer

This trailer has shelves in the front and on the side. It is used for fire extinguisher, HAZWOPER, scaffolding training, or general equipment transportation.

### 2 Confined Space Entry Training Trailer

A special deck on top of this trailer with an opening allows employees to practice confined space entry in a safe learning environment. Accompanying equipment includes: tripod, harnesses, winches, gas meter, and other confined space training equipment.

### 3 Mobile Hearing Trailer

Two state-of-the-art sound booths with a computer workstation for the hearing technician to conduct hearing evaluations are inside the hearing trailer. It is completely climate controlled and has a 50" screen to provide training during the testing process. The trailer will operate from a 120v power source, or can use the included portable generator to power the unit in remote locations.

### 4 Driver Simulator Mobile Training Unit

Autry offers a complete line of training and exercise programs for the transportation industry, emergency medical responders and firefighters, law enforcement, commercial vehicle and novice drivers. Simulation lets drivers experience threatening road conditions in a safe environment – especially the extreme situations you just can't duplicate in a real motor vehicle.
